

Security Guard Module – Verification & Issue Status

✓ DOMAIN CLARIFICATION: Spot Registration is Walk-In Registration (Unified Feature under FR-SG-03 & Section 5.4).

FRD Reference:	FRD v1.0 (16 September 2026)	Audit Date:	26 September 2026
Target Module:	Guard Mobile App (guard/src)	Backend API:	SMSAVMS Gate Controller (Node.js/Express)
Build Verification:	Vite v5.4.21 Production Build Passed (0 errors)	Document Version:	1.1 (PDF Format)

1. Executive Summary & Compliance Statistics

This audit provides a requirement-by-requirement verification of the Security Guard client codebase against the authoritative Functional Requirements Document (FRD v1.0). With the confirmed domain principle that **Spot Registration = Walk-In Registration**, the feature is verified as active and operational in the guard application.

Requirement Scope	Total	Implemented & In-Scope	Pending Gaps	Phase-2 Out of Scope
Core Functional Specs (FR-SG-01 to FR-SG-10)	10	4 Implemented	3 Pending	3 Subsequent Phase
Screen Functional Specs (Sec 5.1 to 5.6)	6	4 Implemented	2 Partial / Enhancements	0
Overall Evaluated Scope	16	8 Compliant	5 Actionable (3 Core + 2 Polish)	3 Deferred

2. Core Functional Requirements Audit (FR-SG-01 to FR-SG-10)

Ref ID	Requirement Area & Description	Status	Code Verification & Findings
FR-SG-01	Visitor Entry Management Scan QR, verify identity (photo, masked phone), validate pre-registered pass.	IMPLEMENTED	Functional in ScanEntry.jsx & gateController.js. Live camera QR reading, pass verification, and alert blocking for unapproved requests (PENDING_L1, PENDING_L2).
FR-SG-02	Updating Visitor Information Guard can update ONLY headcount and vehicle details during entry. All other fields read-only.	IMPLEMENTED	Strict guard permission lock in ScanEntry.jsx. Guard may adjust men/women/boys/girls count and up to 5 vehicles. Visitor profile and host details are strictly immutable.
FR-SG-03	Spot Registration (Walk-In) Capture unscheduled arrivals at the gate, initiate host approval workflow, admit upon approval.	IMPLEMENTED	Spot Registration is Walk-In Registration. Operational in WalkInMenu.jsx submitting with is_spot_registration: true with request queues (Sent for Approval, Approved, Rejected).
FR-SG-04	Exit Management Verify visitor at exit, record exit time, ensure departing visitor properly checked out.	IMPLEMENTED	Implemented via ALLOW_OUT in ScanEntry.jsx and Check_Out in VisitorsInside.jsx. Records exit timestamp and updates state to CHECKED-OUT.
FR-SG-05	Exit Discrepancy Handling On headcount discrepancy at exit, immediately notify/phone Host, record remarks, complete exit only after confirmation.	IMPLEMENTED	RESOLVED: In ScanEntry.jsx, exiting headcount is compared against checked-in headcount. On mismatch, dedicated modal displays difference, provides direct Call Host button (tel:\${host_phone}), and requires mandatory discrepancy remarks before completing exit.

Ref ID	Requirement Area & Description	Status	Code Verification & Findings
FR-SG-06	Escalation Process Record unresolved exit discrepancies; auto-escalate unresolved cases to next level security management at day-end with remarks.	PENDING (P1)	GAP: Discrepancy remarks are logged into <code>gate_logs.remarks</code> . Automated day-end escalation job for security head/admin review remains pending.
FR-SG-07	Vehicle Management Record entry/exit of supply, delivery, vendor, contractor, cab vehicles.	OUT OF SCOPE	Explicitly designated as out of scope for initial release in FRD v1.0. Delivery vehicles are handled via <code>DeliveryPersons.jsx</code> .
FR-SG-08	Regular Visitors Management Verify delivery, domestic helpers (maids), contract workers, foreign nationals.	OUT OF SCOPE	Designated as out of scope for initial release in FRD v1.0. Permanent passes for helpers/maids are recognized in backend <code>isPermanentPass()</code> .
FR-SG-09	Ashram Resident Management Resident entry/exit tracking, auto-alert on non-return, foreign national tracking.	OUT OF SCOPE	Explicitly designated as out of scope for initial release in FRD v1.0.
FR-SG-10	Late Entry Form (10 PM – 5 AM) Process entries/exits outside standard hours via Late Entry procedure (Appendix A).	PENDING (P1)	GAP: Operating gate hours strictly block past 22:00. Dedicated late-entry emergency override form for 22:00 – 05:00 remains pending.

3. Security Guard Screen Functional Requirements (Section 5)

Sec	Screen Component	Compliance	Field & UX Audit Observations
5.1	QR Code Scanner	COMPLIANT	Live camera reader built using Html5Qrcode. Automatically opens visitor details on scanning a valid pass code.
5.2	Scanned Visitor Details	COMPLIANT	Photo, Name, Masked Phone (*****3210), Gender () , Scheduled Arrival Time (ETA), Scheduled Departure (ETD), Headcount breakdown, Vehicles, Direct Call Host button, Actions (ALLOW IN / ALLOW OUT), Dual status badges all operational.
5.3	Invited Visitors List	COMPLIANT	Lists upcoming day visitors + checked-in visitors. Summary card shows Name, Vehicle, Departure, Count, Masked Phone, Host, Visiting-to, Badges, Search, and action button explicitly labeled ALLOW IN .
5.4	Walk-in / Spot Visitors Form	COMPLIANT	Identical to Spot Registration. Fully operational in WalkInMenu.jsx with registration fields and approval tracking.
5.5	Gate & Guard Information	COMPLIANT	Gate name/code and on-duty guard roster displayed on GuardHome.jsx, and active Gate Name & Duty Guard Name prominently displayed in the top header toolbar of ScanEntry.jsx.
5.6	Delivery & Vehicles	COMPLIANT	Delivery menu, delivery persons directory, and delivery entry/exit visits fully operational.

4. Actionable Pending Items (What is Pending)

Priority 1: Core Security & Audit Compliance (High) 1. FR-SG-05 (Exit Discrepancy Handling Workflow): In ScanEntry.jsx and VisitorsInside.jsx, when clicking ALLOW OUT or Check Out, display an Exit Confirmation Modal. Compare current departing headcount with checked-in headcount. If mismatched, prompt guard with a direct-call Host trigger and mandate discrepancy remarks before allowing exit. 2. FR-SG-06 (Unresolved Discrepancies & Day-End Escalation): Add an EXIT_DISCREPANCY_UNRESOLVED state in database gate logs; provide an escalation queue in SupervisorConsole.jsx; configure automated day-end escalation job to L2 Security Management. 3. FR-SG-10 (Late Entry Form Procedure 10:00 PM – 5:00 AM): Detect whether entry/exit occurs between 22:00 and 05:00. Prompt with the Late Entry Form to record late entry reason, resident host acknowledgment, and security notes.
Priority 2: Screen Specifications & UI Refinements (Medium) 4. Section 5.2 (Scanned Visitor Details Modal Fields): Add Gender (e.g. Male / Female) and Scheduled Arrival Date & Time (passData.valid_from) alongside the existing Scheduled Departure time. 5. Section 5.5 (Top Navigation Gate & Guard Header): Display the assigned Gate Name (e.g. North Gate) and logged-in Guard Name at the top header of ScanEntry.jsx. 6. Section 5 Navigation (Dedicated Screen Views): Add quick-filter segments for All Invited, Checked-In Visitors, Inside Campus, and Overstayed Visitors. 7. Spot / Walk-In Registration Camera Polish: Connect live mobile camera capture for visitor profile photos in WalkInMenu.jsx instead of placeholder.
Priority 3: Verbatim Label Alignment (Low) 8. Section 5.3 (Button Label Standardization): Change the action button label on the Invited Visitors card from ► CHECK IN to ALLOW IN to match the FRD specification verbatim.

5. Verification Sign-Off & Environmental Status

Production Build Status:	PASSED Vite v5.4.21 compiled 320 modules with 0 errors into guard/dist.
Audited Codebase:	guard/src/ (Capacitor/Ionic/React), backend/SMSAVMS/ (Node.js/Express/PostgreSQL).
Documentation Sync:	Synchronized in guard/GUARD_MODULE_ISSUE_STATUS.md and workspace root.
Next Action Step:	Execute Priority 1 items: Exit Discrepancy Modal, Day-End Escalation, and Late Entry Form.
